

How to draw a moon - step by step tutorial

With these step-by-step instructions, you can easily draw a beautiful night sky with the moon and stars. This gives you a first basis for a mystical night landscape, which you can expand to your heart's content.

⚠ For this template you need a thin pencil, a pair of compasses, a drawing pen and pens for coloring.

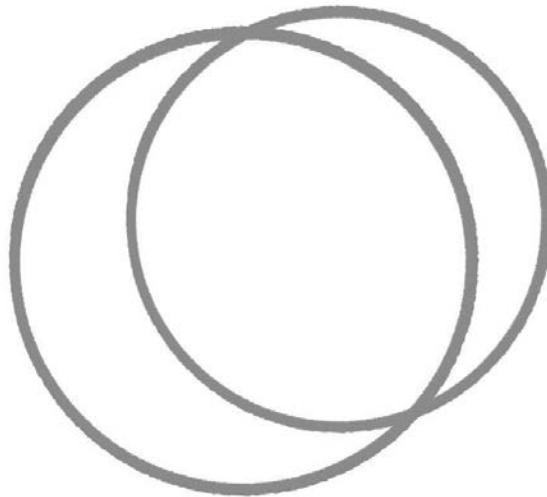

1

Step 1: A Circle

Using a compass or template, draw an even circle. Use a thin pencil for this, because part of the circle only serves as a guide.

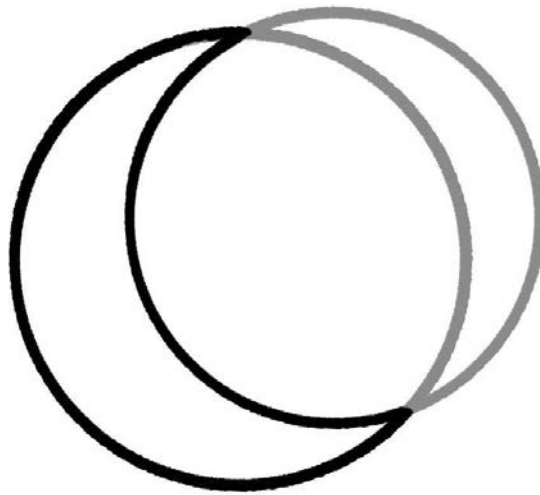

2

Step 2: Overlapping circles

Sketch a second circle of the same size and move it up at an angle. Again, there should only be a thin pencil line.

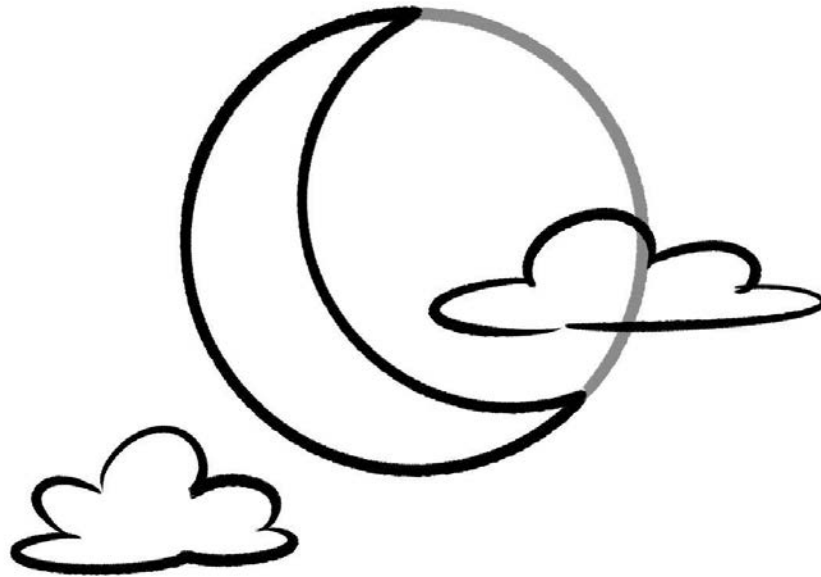

3

Step 3: Final contour for the crescent

You can now cleanly trace the resulting crescent moon with a drawing pen. Carefully erase the outer line of the second crescent.

4

Step 4: Clouds

Place some clouds around the moon. And erase parts of the last guide line if it bothers you.

5

Step 5: Stars

A few stars complete the night sky. Make sure they don't appear ordered, as that will look unnatural.

6

Step 6: Removing the guidelines and coloring

In the last step you can bring your drawing to life with color.
